

Sustaining Western Australia's Agricultural, Horticultural and Pastoral Soils

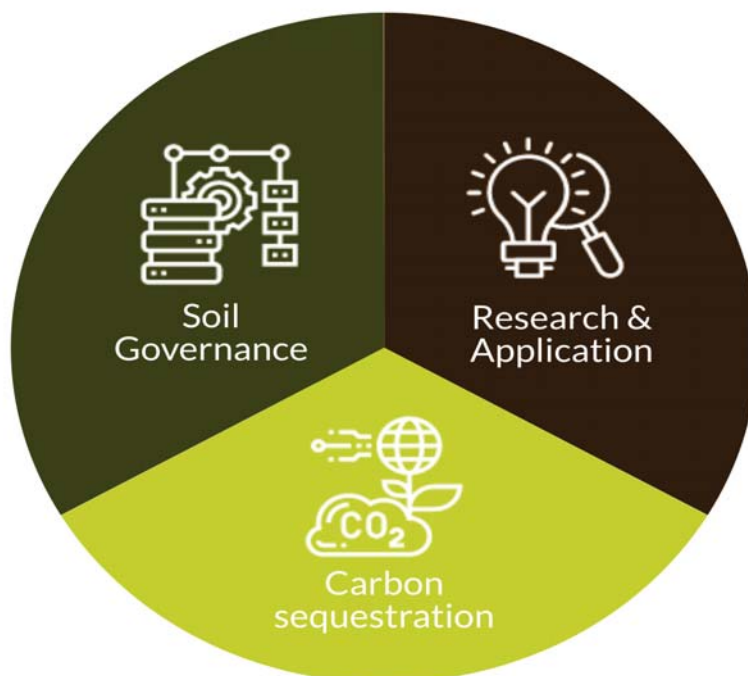

Western Australian Soil Health Strategy Discussion Paper

The State Soil Health Strategy has been initiated to help advance WA's vital agricultural and pastoral industries. A discussion paper has been prepared to provide an opportunity for stakeholders in the agricultural and pastoral industries to shape the development of the Strategy.

Three themes have been identified as key matters for consideration...

SOIL GOVERNANCE

Effective and innovative policies support soil health and protect high-quality agricultural land and soil resources.

RESEARCH AND APPLICATION

Research and development, extension and monitoring activities support new technologies and practices, to provide ongoing improvement in soil health.

CARBON SEQUESTRATION

An increase in soil organic matter and carbon sequestration in agricultural and pastoral soils through practices adapted to local environmental, social, and economic conditions.

YOUR INVOLVEMENT

We are looking for input from stakeholders with a keen interest in the health of WA's agricultural soils. Use the strategy input portal to read the discussion paper and provide feedback.
